

Introducing BioMetrix. Cleaning Has an Impact. Now Your Business Can See It.

What is BioMetrix

Biological Preparations has launched BioMetrix, a data-driven analytics platform that gives businesses always-accessible visibility across their procurement and sustainability performance. Updated monthly, BioMetrix transforms purchasing data into actionable insights that help you measure, optimise, and demonstrate progress.

In today's business landscape, the demand for accurate, meaningful data spans every department, from operations and procurement to sustainability and compliance. BioMetrix brings this data together in one clear view, helping you benchmark performance, uncover opportunities, and drive measurable impact.

With BioMetrix, you can:

- ✔ Analyse spend trends, product mix, and category performance across contracts and sites, right down to individual SKUs.
- ✔ Benchmark performance across sites or contracts to identify overspending and optimise procurement.
- ✔ Quantify sustainability achievements with product-level CO₂ data that compares BioHygiene products against traditional petrochemical alternatives.
- ✔ Present powerful ESG and client reports to demonstrate impact with transparency and confidence.

It's more than a reporting tool; it's a smarter way to lead, perform, and demonstrate your progress.

Why do businesses need a data-driven platform?

Improvement starts with measurement. Whether you're aiming to reduce Scope 3 emissions, optimise procurement, cut spend, or demonstrate sustainability performance, meaningful data is essential.

It's not just about internal strategy; it's about credibility.

Clear, quantifiable insights help you benchmark progress and make better decisions. Just as importantly, they help your business stand out in a market often clouded by greenwashing and vague claims.

From clients and investors to sustainability leads and procurement teams, stakeholders expect transparency, evidence, and data they can rely on.

How BioMetrix Helps Your Business

1. Procurement Efficiency & Spend Analysis

- ✓ Track spend trends, average order values, and product mix by contract, site, or region.
- ✓ Identify your top-spending sites and categories, spot anomalies, and standardise purchasing behaviour.
- ✓ Use data to justify procurement decisions and support supplier negotiations.

2. Sustainability & CO₂e Tracking

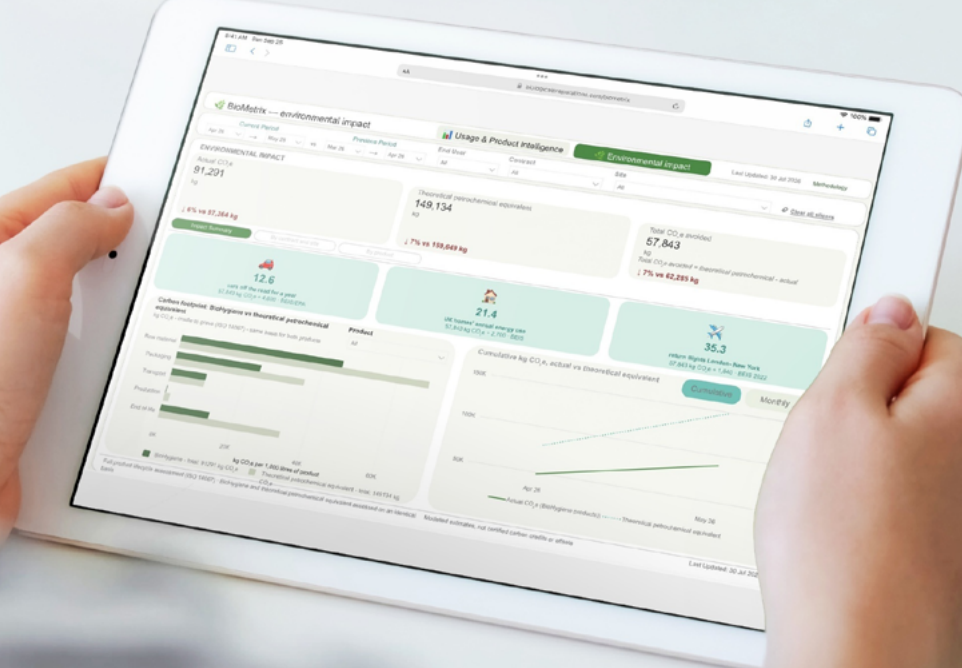

- ✓ Quantify Scope 3 savings with product-level CO₂ data, based on verified conversion factors.
- ✓ Compare BioHygiene products with traditional alternatives to model carbon avoidance.
- ✓ Translate your impact into relatable terms to communicate results effectively.

3. Operational & Site Performance Management

- ✓ Benchmark sites and contracts with league tables and trend charts.
- ✓ Identify which locations are underperforming or excelling to inform management focus.
- ✓ Use actionable data to improve consistency, reduce waste, and enhance operational efficiency.

4. ESG & Client Reporting

- ✓ Utilise interactive reports for ESG submissions, client updates, and board reporting.
- ✓ Provide transparent evidence to support sustainability disclosures and audit readiness.
- ✓ Strengthen stakeholder confidence with clear, data-driven performance reporting.

Who is BioMetrix for?

BioMetrix is designed for Biological Preparations customers who want smarter insights, stronger reporting, and measurable impact. It's ideal for:

- ✓ **Procurement Managers**
Optimise spend and standardise purchasing across sites.
- ✓ **Operational Managers**
Benchmark site performance and reduce inefficiencies.
- ✓ **ESG & Sustainability Professionals**
Quantify Scope 3 savings and strengthen reporting credibility.

How It Works

Data Collection

Purchasing data is received from distributors.

Dashboard Refresh

Data is processed and updated every four weeks.

Interactive Access

Users can log in anytime to view, filter, and analyse their data.
