

Turn Purchasing Data Into Better Procurement Decisions

Gain clearer visibility of BioHygiene spend, purchasing patterns, and product adoption across participating sites and contracts

The background of the slide features a dark blue gradient with a faint grid of dotted lines. Overlaid on this are several abstract data visualizations: a bar chart with varying bar heights and several line graphs with circular markers at data points. The lines and bars are in shades of blue and white, creating a technical and data-driven aesthetic.

Managing cleaning procurement across multiple products, locations, and distributor accounts can make it difficult to see where money is being spent and whether purchasing remains consistent across an organisation. Procurement teams are often left working across separate invoices, spreadsheets, and distributor reports. While these show individual transactions, they do not always provide the consolidated insight needed to identify patterns, compare locations, or support strategic decisions BioMetrix helps close that gap by bringing verified BioHygiene purchasing data into one accessible platform, giving procurement teams a clearer understanding of spend, quantities, product mix, and associated environmental performance.

Make Cleaning Spend Easier to Understand

Small variations in purchasing can become significant when repeated across multiple sites and contracts. Without a consistent view, it can be difficult to identify unusual activity, understand product adoption, or determine where further investigation may be needed.

BioMetrix brings the available information together in one accessible platform, helping procurement teams to:

- ✓ Understand where BioHygiene spending is being directed.
- ✓ Compare purchasing activity across participating sites and contracts.
- ✓ Identify trends, inconsistencies, and potential outliers.
- ✓ Monitor product- and category-level purchasing.
- ✓ Connect procurement decisions with associated environmental impact.

Why Can You Trust the Data?

Verified Distributor Information

Purchasing data is supplied directly by participating distributors, helping provide traceability back to recorded customer transactions.

Consistent Data Processing

Distributor submissions are processed into a standardised structure, making it easier to compare information across available sites and contracts.

Product-Level Detail

Information can be explored down to individual BioHygiene products rather than relying only on broad category totals.

Transparent Data Coverage

BioMetrix shows when the latest distributor data was received, helping users understand the period covered by each dashboard.

Clear Environmental Methodology

Purchasing data is matched with BioHygiene's product-level CO₂e factors, enabling commercial and environmental performance to be viewed together.

Exportable Underlying Data

Users can download data in Excel or CSV format for further analysis or inclusion within existing procurement and finance workflows.

From Purchasing Data to Procurement Insights

Verified purchasing data from participating distributors is transformed into clear procurement insights. BioMetrix then allows authorised users to:

- ✓ Filter results by date, site, and contract.
- ✓ Review spend, quantities, and average order values.
- ✓ Examine product- and category-level purchasing trends.
- ✓ Compare activity across participating sites and contracts.
- ✓ Identify differences that may require further investigation.
- ✓ Explore the CO₂e associated with BioHygiene purchasing.
- ✓ Export the underlying data for internal analysis.

Dashboards are accessible through a secure login and updated every four weeks when new distributor data is available.

BioMetrix

Move Beyond Transactions.
Make More Informed
Decisions.
